https://stackoverflow.com/questions/5747806/what-is-the-killer-reason-for-using-mongoose-orm.

What is the killer reason for using Mongoose ORM?

I've been using it with a new project, but it is also my first time using MongoDB. Defining a schema seems unnecessary because I thought the upside of mongo was that it didn't need defined schemes....

The Mongoose schema is quite different from SQL schema where you have a complete set of Data Definition Language. The model in Mongoose does quite a lot as you can write or add methods to create a publish and subscribe architecture to inform all the connected clients about the change in the collections.

@Gary Fishback think we are in the same boat so to speak. Iol I would like to expand upon the existing program with maybe more on the public side of the webpages or add a couple more webpages to give it more of a fullness look, but with FSW140 capstone project ... time is not on my side for this week lol.
